

MARYAM ALI

MACHINE LEARNING

PROFESSIONAL SUMMARY

Aspiring Machine Learning Engineer with knowledge of Python, Machine Learning, and Data Analysis. Passionate about building data-driven solutions and applying AI technologies to real-world challenges.

"Leveraging Machine Learning to unlock the value hidden in data"

Phone:

+923126735539

Email:

maryamalimaan024@gmail.com

Address:

502D Satellite Town RYK

Linkedin:

GitHub:

<https://github.com/Maryamali024>

CERTIFICATION:

- **Modern and generative AI** (Cisco networking academy)
- **Python Bootcamp** (YPDC)
- **Python Django** (Dev Castle)
- **Graphic Designing** (Hello World)

EDUCATION:

Bachelor of Artificial Intelligence | 2023-2027 (continue)

Khwaja Fareed University of Engineering & IT

- **CGPA: 3.3/4.00 (6 Semester)**

FSC (Pre Medical) | 2021-2023

Punjab College

- **81%**

SKILLS:

- **Programming Languages** : Python ,C++ ,HTML ,CSS
- **Web Frameworks** : Machine Learning , Deep Learning , LLM , Langchain
- **Tools & Platforms** : VS Code , Jupyter Notebook , Virtual Environment(venv) ,GitHub
- **Other Skills** : Graphic Designing , AI , NLP , Computer Vision

INTEREST:

- Tech Exploration
- Problem Solving
- Creative Thinking
- Video Editing

PROJECTS:

- **Hand Gesture Controlled Virtual Mouse using Computer Vision**

Developed a virtual mouse using **Python**, **OpenCV**, and **MediaPipe** to control cursor movement and perform click actions through real-time hand gesture recognition..

- **Real and Fake Voice Detection System**

Built a voice classification system using **Python**, **Machine Learning** and **audio feature extraction** techniques to distinguish between authentic and synthetic voices..

- **Lie Detection System**

Developed a web-based lie detection application using **Python**, **Flask API** and **Machine Learning** to analyze speech-related features and generate predictions through an interactive interface

- **Email Spam Detection System**

Developed an NLP-driven email filtering system using **Scikit-learn**, **NLTK**, **TF-IDF** and **Machine Learning** to automatically classify incoming emails as spam or legitimate, improving message screening efficiency
