SUMMARY

BS Artificial Intelligence student at KFUEIT (3.32 GPA, 6th Semester) with two hands-on AI/ML internships and Cisco certifications in Modern & Generative AI and Python Essentials. Strong foundation in Machine Learning fundamentals — including Logistic Regression, statistical analysis, and supervised learning. Proficient in Python and the core data science stack (Pandas, NumPy, Scikit-Learn), with practical experience building RAG architectures, LLM orchestration pipelines using LangChain, and vector retrieval systems. A genuinely curious problem-solver who learns by doing, asks “why,” and is excited to build real-world AI solutions from scratch.

EXPERIENCE

Hex Softwares, AI / ML Engineer Intern

Apr 2026 - May 2026

- Applied Machine Learning fundamentals — including classification models, statistical analysis, and model evaluation techniques — to develop and test AI solutions on real-world datasets in a production engineering environment.
- Built Python-based data pipelines using Pandas and NumPy for data ingestion, cleaning, and feature engineering, preparing high-quality inputs for downstream ML model training and evaluation.
- Researched LLM orchestration tools, RAG architectures, and vector store strategies, identifying optimal integration approaches and presenting findings to drive team-wide technical decisions.
- Demonstrated a proactive, learning-by-doing mindset — independently explored new frameworks, asked the right questions, and delivered well-documented, reproducible work in a fast-paced remote environment.

MercurySols, AI-Integrated Full-Stack Intern

Jun 2025 - Sep 2025

- Designed and integrated RESTful API pipelines connecting AI-driven backend services with frontend applications — built for scalability, reliability, and efficient structured data exchange.
- Managed SQL database schemas and data pipelines supporting real-time analytics and AI model output processing, applying strong Python and data management fundamentals throughout.
- Built AI performance monitoring dashboards in React.js and TypeScript, surfacing system health and model metrics for engineering and product teams in real time.
- Maintained Git/GitHub version control, branching strategy, and CI/CD discipline within a cross-functional team — clean commit history, documented processes, consistent code standards.

EDUCATION

Khwaja Fareed University of Engineering & IT (KFUEIT)

Bachelor of Science • Artificial Intelligence

- Currently in 6th Semester; core coursework: Machine Learning, Natural Language Processing (NLP), Statistical Analysis, Speech Processing, Exploratory Data Analysis (EDA), Parallel Computing.
- Strong hands-on foundation in Logistic Regression, classification models, and statistical analysis through coursework and project work using Python, Pandas, NumPy, and Scikit-Learn.

LICENSES & CERTIFICATIONS

Modern & Generative AI

Cisco Networking Academy •

Python Essentials

Cisco Networking Academy •

AI-MERN Stack Engineering

MercurySols (Internship Certification) •

SKILLS

Machine Learning • Logistic Regression • Classification • Statistical Analysis • Supervised Learning • Model Evaluation • Python • Pandas • NumPy • Scikit-Learn

HONORS & AWARDS

Cisco Dual Certified in Python Essentials and Modern & Generative AI

Cisco Networking Academy •

structured, verifiable knowledge in LLM methodologies, RAG pipeline design, and Python engineering fundamentals.
